

# Diego Duarte Fernández

## Software Developer

### OBJECTIVE

My principal goal in the computer science area is to contribute significantly to the business world through the application of my tech knowledge and soft skills. I constantly seek to improve my capabilities to offer innovative and efficient technological solutions that add value to company operations. I have worked supporting and creating software for small companies also, I've created some personal projects.

### EXPERIENCE

---

JAN 2022 – JAN 2022 – Java | Arduino | Processing

**SIGCHI Event** | It was a technology event where I implemented my programming skills to solve a random environmental problem and me and my team got first place with the best proposal to solve the exploitation of natural resources problem.

AUG 2023 – MAY 2024 – Express | React | MySQL | MaterialUI

**Dalopcan Company** | This project is part of a university requirement called TCU, which consists of supporting companies through technology. The software solution is made up of 3 parts: database, API, and front-end application. In this project you can manage the clinical records that the company uses to keep track of its clients/patients.

MAR 2021 – FEBRUARY 2022 – WordPress | HTML | CSS3

**Gandoca Tours Company** | This is a web app made in WordPress and WooCommerce. My role in this project was support it, fixed errors and create new content and sections.

MAR 2023 – JUN 2023 – PHP | Angular | MySQL | Bootstrap

**Funko Pop Academic Project** | This is a college project in which we can manage inventory of a Funko's Shopping Cart. This project was created building and API using the microframework Slim and the frontend client with Angular.
